

# OASIS at RTI International

The One Acquisition Solution for Integrated Services (OASIS) is a GSA government-wide contract vehicle designed to allow maximum flexibility in meeting client needs for complex professional service requirements. RTI International provides its clients with unmatched capabilities in social science and research under OASIS Pool 2 R&D in the Social Sciences.

## Our Highlighted Capabilities in Social Science and Research

### Epidemiology and Special Populations

Our health research in populations includes special and vulnerable groups as well as broader-based epidemiological studies. We have extensive domestic and international experience in survey and registry work as well as with complex multisite epidemiological studies. Our expertise includes

- data collection and coordination
- intervention and treatment evaluations
- epidemiological studies of infectious diseases
- multisite study management
- survey design and development

### Health Economics

Our health economists study the underlying causes of the high cost of health care and whether health care can be improved through better resource allocation and health care financial management. Research areas include

- cost/benefit analyses of interventions and treatments
- cost-effectiveness studies
- economic modeling
- program evaluations

### Military Behavioral Health

With more than 25 years of experience conducting military studies, we understand the military culture and how to work with military and civilian defense leaders. Our military behaviorists conduct research and provide research support for the Department of Defense and other U.S. government agencies to improve force readiness and the lives and working conditions of military personnel and their families. We have demonstrated expertise in

- program design, implementation, management, and evaluation
- data collection: personnel surveys, quality-of-life studies, needs assessments
- prevention and intervention studies
- field trials
- health communications materials design and testing
- financial, policy, and plan analysis
- statistical and psychometric analysis
- training research and systems: simulation training, distance learning, analysis, and design

## Technology Economics

RTI provides independent, interdisciplinary assessments of the economic contributions of technology programs to society's economic, public health, and environmental welfare. Through our Innovation-Led Economic Development Services, RTI uses state-of-the-art approaches to help you find, leverage, and link—or create—sources of innovation to transform your community. Studies involve

- market assessment and modeling
- benefit/cost estimation
- strategic planning and policy analysis/development
- program evaluation and benchmarking
- technology economics capabilities
- valuing new technologies
- primary data collection

## Justice, Safety, and Resilience

Our research is founded on the idea that justice, safety, resilience, and related issues are best understood in the context of surrounding social ills, systems, and policies. Our studies have included

- basic and applied research
- program development and implementation
- multisite program evaluation
- data collection
- quantitative and qualitative analysis
- cost-benefit analysis
- research computing
- dissemination

## Food and Nutrition

Our food and nutrition experts analyze and evaluate the effects of policies and regulations affecting food and agriculture to improve health and well-being. Areas of research include

- analysis and modeling
- program and policy evaluation
- education and training
- data collection
