Contract No. 290-02-0016

RTI Project No. 8452.001

October 24, 2003

This report may be used, in whole or in part, as the basis for development of clinical practice guidelines and other quality enhancement tools, or a basis for reimbursement and coverage policies. AHRQ or U.S. Department of Health and Human Services endorsement of such derivative products may not be stated or implied.

AHRQ is the lead Federal agency charged with supporting research designed to improve the quality of health care, reduce its cost, address patient safety and medical errors, and broaden access to essential services. AHRQ sponsors and conducts research that provides evidence-based information on health care outcomes; quality; and cost, use, and access. The information helps health care decisionmakers—patients and clinicians, health system leaders, and policymakers—make more informed decisions and improve the quality of health care services.

Appendix B Quality Rating Form

Author, Year:	Reviewer
Short Title:	
Study Population a. Adequate description of study population	Good Good Fair Poor Poor
b. Study population appropriate for drawing relevant conclusions	Good Fair Poor Poor
Comment:	
2. Intervention (KQ2 Only) Clearly described	Good Fair Poor NA
Comment:	
3. Comparability of Subjects Creation of comparable groups and appropriate randor Appropriate method of creating sample population	Good Fair Poor D
Comment:	
4. Literacy Measurement Use of valid, reliable and clearly defined method	Good
Comment:	
5. Maintenance of Comparable Groups Loss to follow-up and cross-over minimized	Good
Comment:	
6. Outcome Measurement Method of outcome assessment clearly defined, standa to groups (includes blinding)	Fair 🗖
Comment:	Poor
7. Statistical Analysis Statistical tests appropriate and multiple comparisons a	addressed Good □ Fair □ Poor □
Comment:	
8. Appropriate Control of Confounding Limitation, stratification or multivariate analysis or ran	Poor Poor
Comment: — 9. Funding Source:	

Appendix C Evidence Tables

Appendix C. Evidence Tables

Because the evidence tables stand alone from the detailed explanation of methods and issues presented in the main evidence report, we recap here briefly the organization and content of the tables. Particularly relevant is the set of key questions we addressed, certain core items of information in the tables, and our quality grading scheme. We also provide an extensive glossary of every abbreviation, acronym, or other initialism used in the evidence tables, but insofar as possible we have attempted to spell out terms. For more detailed information, we refer readers to the full evidence report to be found at www.ahrq.gov.

Key Questions

The evidence tables in this appendix summarize all empirical articles discussed in Chapter 3 of our evidence report. We first present articles answering Key Question 1, followed by those answering Key Question 2; articles are then arranged alphabetically by author(s).

Our key questions and their paired subsets are as follows:

- **Key Question 1**: Are low literacy skills related to:
 - a. Use of health care services?
 - b. Health outcomes?
 - c. Costs of health care?
 - d. Disparities in health outcomes or health care service use according to race, ethnicity, culture, or age?
- **Key Question 2:** For individuals with low literacy skills, what are effective interventions to:
 - a. Improve use of health care services?
 - b. Improve health outcomes?
 - c. Affect the costs of health care?
 - d. Improve health outcomes and/or health care service use among different racial, ethnic, cultural, or age groups?

Information in Evidence Tables

The tables contain information about the study citation (with references to these studies to be found at the end of the appendix), the study population and setting, the objectives of the research, the interventions, study outcomes (and literacy measures, where relevant), and the quality score (see below). When the investigators did analyses adjusting for covariates in multivariate models (such as sociodemographic or health characteristics of the study population), we have noted that

those analyses are adjusted and provided a listing of the covariates in question. Analyses relying on simplier bivariate relationships are noted as unadjusted.

Grading the Quality of Individual Studies

We rated the quality of each article based on the criteria in the quality rating form reproduced in Appendix B. We present these scores in the last column of each evidence table entry. The eight quality scores correspond to the first eight questions included on the quality rating form. Because we included both intervention and observational studies in our review, several quality rating form questions were relevant only to certain studies. In those cases, the quality rating for that item in the evidence table entry is "not applicable" (NA). We also collected information on the study's funding source for the ninth (last) item on the quality rating form; however, that information (when available) was not included in a quantitative score and instead is presented separately in the last column of each evidence table entry.

The two study team members who abstracted the summary information concerning the article also independently rated the quality of each article. For each of the eight categories, articles were rated as "good," "fair," "poor," or "NA." We converted the good/fair/poor ratings into numeric values in which poor = 0, fair = 1, and good = 2. We excluded from our evaluation criteria for a particular study any items designated NA. Instances in which one rater provided a score for an item and the second said the item was NA were reconciled between the two raters. We did not reconcile any other ratings between the two abstractors.

Each of the eight quality scores we present in the evidence table represents a simple average of the scores provided by the two raters. The total score is then the average of each of these scores with each item weighed equally. Corresponding to our individual item ratings, we concluded that, overall, an article should be considered poor with a rating of ≤ 1.0 , fair with a rating of ≥ 1.0 and ≤ 1.5 , and good with a rating of ≥ 1.5 .

Glossary of Abbreviations and Acronyms Used in Evidence Tables

Abbreviation/ Acronym	Definition
*	Calculated by evidence report authors
AA	African-American
ABLE	Adult Basic Learning Examination
ABMT	Autologous bone marrow transplant
AC	Asthma clinic
ADEPT	Adherence and Efficacy to Protease Inhibitor Therapy study
ADL	Activities of daily living
AFDC	Aid for Families with Dependent Children
AIDS	Acquired immune deficiency syndrome
BCT	Breast-conservation therapy
BMI	Body mass index
BSE	Breast self-exam
CARDES	Cardiovascular Dietary Education System
CBE	Clinical breast exam
CD	Compact disc
CD-ROM	Compact disc—read-only memory
CI	Confidence interval
COPD	Chronic obstructive pulmonary disease
CPAP	Continuous positive airway pressure
DBP	Diastolic blood pressure
DICCT	Deaconess Informed Consent Comprehension Test
dl	Deciliter
DM	Diabetes mellitus
DMHDS	Dunedin Multidisciplinary Health and Development Study
ED	Emergency department
EFNEP	Expanded Food and Nutrition Education Program
FSC	Family Service Center
GED	General equivalency degree
Grady	Grady Memorial Hospital, Atlanta, GA
HAART	Highly active antiretroviral therapy
Harbor	Harbor-UCLA Medical Center, Torrance, CA
HbA1c	Glycosylated hemoglobin
Hg	Mercury
HIV	Human immunodeficiency virus
НМО	Health maintenance organization
HTN	Hypertension
IADL	Instrumental activities of daily living
IDL	Instrument for the diagnosis of reading
IQ	Intelligence quotient
IUD	Intra-uterine device
kcal	Kilocalories
kg	Kilogram
KMS	Knowledge of Medication Subtest
LAE	Los Angeles English speaking (Harbor-UCLA Medical Center)
LAS	Los Angeles Spanish speaking (Harbor-UCLA Medical Center)
1	Liter
MDI	Metered dose inhaler
mg	Milligrams
MKS	Medication Knowledge Score
	Millimeters
mm mmol	Millimoles
MMSE	Mini-Mental State Examination
NA	Not applicable
INA	ινοι αμμιισανίσ

Glossary of Abbreviations and Acronyms Used in Evidence Tables (continued)

Abbreviation/	
Acronym	Definition
NART	National Adult Reading Test
NR	Not reported
NS	Not significant
OCP	Oral contraceptive pill
OR	Odds ratio
Р	Probability
PACE	Pima County adult education program, Tucson, AZ
PAG	Pictorial anticipatory guidance
Pap test	Papanicolaou smear
PCKQ	Prostate Cancer Knowledge Questionnaire
PORT	Patient Outcomes Research Team
QLS	Questionnaire Literacy Screen
r	Correlation coefficient
RA	Research assistant
RCT	Randomized controlled trial
REALM	Rapid Estimate of Adult Literacy in Medicine
RR	Relative risk
RSPM	Raven Standard Progressive Matrices
SBP	Systolic blood pressure
SD	Standard deviation
SES	Socio-economic status
SF-36	Short Form 36
Sig	Significant
SIP	Sickness Impact Profile
SMOG	Readability formula
SNAP	Stanford Nutrition Action Program
SPMSQ	Short Portable Mental Status Questionnaire
STD	Sexually transmitted diseases
S-TOFHLA	Short Test of Functional Health Literacy in Adults
SWOG	Southwestern Oncology Group
TABE	Test of Adult Basic Education
TALS	Test of Applied Literacy Skills
TIPP	The Injury Prevention Program

Appendix D Acknowledgments

Appendix D. Acknowledgments

This study was supported by Contract 290-02-0016 from the Agency for Healthcare Research and Quality (AHRQ), Task No. 3. We acknowledge the continuing support of Jacqueline Besteman, JD, MA, Director of the AHRQ Evidence-Based Practice Center (EPC) Program, and Marian James, PhD, the AHRQ Task Order Officer for this project.

The investigators deeply appreciate the considerable support, commitment, and contributions of the EPC team staff at RTI International and the University of North Carolina (UNC). From UNC, we thank EPC Co-Director, Timothy S. Carey, MD, MPH; EPC Literature Search Specialist, B. Lynn Whitener, PhD; UNC Project Coordinator, Anne M. Jackman, MSW; and Research Assistant, Donna Curasi. We also express our gratitude to Wallace A. Campbell, editor, and Loraine Monroe, EPC word processing specialist, at RTI International.

Technical Expert Advisory Group

We also extend our appreciation to the members of our Technical Expert Advisory Group (TEAG), who provided advice and input during our research process. The RTI-UNC EPC team solicited the views of TEAG members from the beginning of the project. TEAG members also provided insights into and reactions to work in progress and advice on substantive issues or possibly overlooked areas of research. TEAG members participated in refining the analytic framework and key questions and discussing the preliminary assessment of the literature, including inclusion/exclusion criteria, and also provided input on the information and categories, including evidence tables. The TEAG was both a substantive resource and a "sounding board" throughout the study. It was also the body from which expertise was formally sought at several junctions. TEAG members are listed below:

David Baker, MD, MPH, FACP Northwestern University Medical School Chicago, IL

Terry Davis, PhD Louisiana State University Shreveport, LA

Janet Ohene-Frempong, MS J.O. Frempong & Associates Elkins Park, PA

Joanne Schwartzberg, MD Director, Aging and Community Health American Medical Association Chicago, IL Julie Gazmararian, MD Emory Center for Health Outcomes Atlanta, GA

Helen Osborne, Med, OTR/L Health Literacy Consulting Natick, MA

Rima Rudd, PhD Harvard School of Public Health Boston, MA

Steve Woloshin, MD Dartmouth University Norwich, VT

Peer Reviewers

We gratefully acknowledge the following individuals who reviewed the initial draft of this report and provided us with constructive feedback. External reviewers comprised clinicians, researchers, representatives of professional societies, and potential users of the report. We would also like to extend our appreciation to David Atkins, MD, from AHRQ for contributing peer review comments. Our peer review panel also includes five members of the TEAG: Janet Ohene-Frempong, Julie Gazmararian, Helen Osborne, Rima Rudd, and Joanne Schwartzberg. Peer review was a separate duty for these individuals and not part of their commitment as TEAG members. All are active professionals in the field. The peer reviewers were asked to provide comments on the content, structure, and format of the evidence report and to complete a checklist. The peer reviewers' comments and suggestions formed the basis of our revisions to the evidence report. Acknowledgments are made with the explicit statement that this does not constitute endorsement of the report.
