Asia Regional Office

Core Capabilities
• Economic development
• Education
• Environmental management
• Governance
• Health
• Information and communication technology
• Knowledge sector development
• Monitoring and evaluation

RTI International is a leading nonprofit research and development organization that has supported governments, foundations, and private-sector clients working across Asia for more than 35 years. We have more than 700 staff members working in South and Southeast Asia, with ready access to our worldwide staff of 4,700 experts across the social and laboratory sciences, international development, and engineering fields.

Together with our many local partners, we deliver evidence-based solutions and advisory and technical services to help countries achieve national, regional, and local goals in public management and governance, education, health, environmental management, economic development, food security and agriculture, and information and communication technology.

Our Asia Regional office enables us to ensure quality project management, respond rapidly to client demands, build and maintain local partnerships, and identify public-private partnerships for sustainable development. Our clients in Asia include the U.S. Agency for International Development (USAID), the U.S. National Institute of Child Health and Human Development (NICHD), Australian Government’s Department of Foreign Affairs and Trade (DFAT), World Bank, Asian Development Bank (ADB), Bill & Melinda Gates Foundation, host country governments, and other funders and donor organizations.
