Efficacy of a Woman-focused Intervention at Reducing Alcohol Use among Sex Workers in South Africa: Differential Effects by HIV Testing and Status

Wendee M. Wechsberg, PhD1*, Rhonda S. Karg, PhD1, Winnie K. Luseno, MS1, Charles Parry, PhD2, and Siobhan K. Young, MPH1

1. Introduction

1.1. Conditions: Past Drinking Days across different study groups

1.2. Intervention Efficacy: Preliminary Data (Continued)

2. Methods

2.1. Study Design

2.2. Sample Characteristics

2.3. Results

2.3.1. Sample Characteristics

3. Results

3.1. Sample Characteristics

4. Discussion

4.1. Other Studies: HIV and Alcohol Use

ACKNOWLEDGMENTS

The research was supported by U01 HD 006386-01 from the National Institute of Child Health and Human Development and the National Institute on Alcohol Abuse and Alcoholism. The intervention and control conditions were implemented by Health ComPact, a local research and training organization supported by the University of the Witwatersrand, Johannesburg, South Africa.
